Licence entitlements

The program is licensed on a per entity and per year basis. For example, a user may licence the program in 2005 for 3 entities and 5 years. This allows the user to perform tax effect accounting calculations for those three entities covering the financial years 2005 through to 2009 inclusive.

The advantage of licencing multiple years up-front is that the user has immediate access to multiple period calculations which greatly assists in planning and budgeting.

If the user wishes to use the program to perform calculations for entities and/or years not covered by the initial license, a license upgrade can easily be arranged by telephone.

Alternative order and payment methods: (a tax invoice will accompany the program package)
